I. I. Preface, Acknowledgements, Sources of References.

The dengue fever bibliography project was initiated in 1979 by Dr Timothy Kuberski, at that time SPC epidemiologist on loan from the United States of America. Encouragement and assistance has been received from the present SPC epidemiologist, Dr Peter Bennett, also on loan from the United States and from the Dengue Fever Advisory Committee meetings held in Suva in 1980.

The bibliography has been edited by Dr Kuberski, Dr Goro Kuno of the San Juan Laboratories Center for Disease Control and Bess Flores, South Pacific Commission librarian who also acted as coordinator. Further editorial assistance has been promised by Dr S. Hotta of Japan and Fay Baker, Biomedical Librarian, Monash University, Australia.

In Honolulu, Dr Leon Rosen of the Pacific Research Unit and Dr Scott Halstead of the University of Hawaii gave permission for Ms Betsy Bremmer and Ms Laurie Thompson of the Graduate School of Librarianship to include references from extensive private collections relating chiefly to the Pacific area and South East Asia. Australian material of historical interest was provided by the Monash University's Biomedical Library which produced the first draft of 1000 references.

The draft elicited further references and comment from Dr Scott Halstead, Dr W. McD. Hammon, Dr Leon Rosen and Dr Philip Russell while Dr Goro Kuno provided over 600 references from his own collection which is particularly rich in Caribbean and Japanese material.

Mr Paul Hodsson, Life Sciences Librarian, National Library of Australia secured permission from the US National Library of Medicine for South Pacific Commission to use and quote from MEDLARS tapes. These are identified in the Master Reference list by double asterisks (**).

Data entry and correction was carried out by Malia Taofifenua of the South Pacific Commission. The programs for the first computerised bibliography produced in the South Pacific Commission area were designed and executed by the South Pacific Commission Computer Systems Manager Conrad Hopman, who also drew the coordinator's attention to many errors, assisted in producing the KWIT index and supervised production and printing.

This preliminary edition has been produced with the sole aim of soliciting your help and comments on omissions, inaccuracies and deficiencies. All correspondence should be addressed to The Secretary General, South Pacific Commission, B. P. D5, Noumea Cedex, New Caledonia so that the librarian may ensure that necessary adjustments are made, and keep the co-editors informed of the progress of the "final" edition.

The bibliography at present contains more than 2000 references and is held on magnetic tape at the South Pacific Commission. After distribution of this draft, a limited number of copies of the "final" edition will be provided on microfiche and printed form. The bibliography will thereafter be updated. Users may then request printouts listing new references or searches according to their specific requirements.

I. II. Scope.

This bibliography is intended to provide, chiefly for dengue specialists and workers, a comprehensive coverage of scientific literature relating to dengue fever and dengue fever viruses published to 1980.

There are no limitations on date, language or area covered, and the only conscious omissions are of unpublished, "semi-published" or ephemeral material and references of exclusively entomological interest. In certain parts of the world and at certain periods of time, the exact etiology of diseases described as dengue, or suspected to be dengue, has not been clearly established, but articles which specifically mention dengue have, nevertheless, been included.

I. III. Notes on Arrangement of Text and Indexes.

The complete bibliography consists of:

- the master reference list
- a permuted author index
- a source index
- a publication date list.
- a keyword in title permuted index

Copies of the complete bibliography have been produced for use of the editors; the abbreviated version (master list plus permuted authors) has been produced in 15 copies for circulation to other specialists.

Specific notes are provided as follows:

(a) Master List. The master reference list is in numerical sequence following the order in which the references were entered; it is therefore not necessarily in alphabetical order. The complete citation includes author, title, source, language and date. Languages are given, when known, in abbreviated form - e.g. En = English; Fr = French; ? = unknown. Months are also abbreviated to the first 3 letters and appear generally before the year. In some MEDLARS references the month appears after the year. MEDLARS style is followed in monograph and periodical citations. Incomplete references are sometimes given in the hope that collaborators will provide the missing details not found using SPC library resources. The double asterisk (**) indicates that the reference was supplied by MEDLARS on tape, even though it may also have been available from other sources.

(b) Permuted Author Index. Each entry in the permuted author index indicates the reference number in the master list. Each author in a multi-authored reference appears in alphabetic sequence, computer sorted on 30 characters. As MEDLARS and SPC entries do not have the same spacing for name initials, 30 character sorting sometimes results in slight separation of entries referring to a particular author. It is not, without much additional computer programming, possible to sort on single author + date, author + 1 + date, author + 2 + date - or by author plus title or other established bibliographic conventions.

(c) Source Index. Sources (titles of periodicals, publishers of monographs) are listed in alphabetical order again sorted on 30 characters. Abbreviated sources are given only when it has not been possible to identify the source from

SFC library resources.

(d) Date Index. Publication dates are listed with the appropriate master reference number in chronological order between 1789 and 1980.

(e) Permuted Keyword in Title Index. Each keyword appears, with the appropriate master reference number, in due alphabetical sequence sorted on 30 characters. In order to keep the KWIT index down to a manageable length, first all articles, prepositions and conjugations were deleted. Next were deleted such words as "study", "progress", "research" and, finally, when the list remained still far too long, words which could be understood to be in the title (e.g. "dengue" and "virus") were also deleted. The index, then, has been drastically edited. It includes references to persons, species and places named in the titles in the form in which they were named e.g: "pacific", "new hebrides" and "futuna" are separated. The deficiencies - inherent or locally produced- of the KWIT index are acknowledged. The "final edition" should include a subject and place category index plus an alphabetic guide.
