

American Samoa Population: 2005

ASG Department of Commerce, Statistics Division, American Samoa 96799

The official estimate of the population of American Samoa as of July 1, 2005 is 65,500.

The American Samoa Census 2000 released by the United States Bureau of the Census counted 57,291 persons living in American Samoa. The count was much lower than was estimated, however, our population is considered one of the fastest growing population in the Pacific Region.

Census count since 1974

| | |
|------|-------------|
| 2005 | 65,500 est. |
| 2004 | 64,100 est. |
| 2003 | 62,600 est. |
| 2002 | 60,800 est. |
| 2001 | 59,400 est. |
| 2000 | 57,291 |
| 1990 | 46,773 |
| 1980 | 32,297 |
| 1974 | 29,190 |

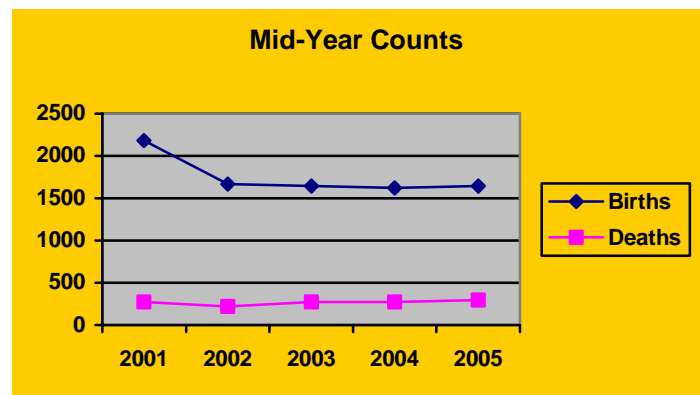

The population estimates of American Samoa in years after the 2000 census have steadily gone up by an average of about a 1,600 persons each year. This growth is solely due to the natural growth of the resident population without any migration component. Since 2002, there has been no record of arrival and departure data for American Samoa, in order to determine returned migration and net migration.

The growth rate based on these annual estimates is 2.3 percent. The growth of our population has somewhat slowed down in the past decade. As such the number of newborns has remained at a 1,700 in the past five years. The continuous drop in the number of newborn suggests a decline in Total Fertility.

As stated, the migration component has not been considered in the current population estimates due to the lack of arrival and departure data. While the Balancing Equation formula extrapolated an out-migration pattern between the 1990 and 2000 censuses, the lack of current statistics on returning residents, net migration and visitors negated the usefulness of intercensal migration estimates. Likewise local conditions suggest constant influx of migrants from Asian countries as well as neighboring Pacific Island countries into American Samoa.

Vital statistics data is considered fairly complete. About 1,647 births were reported between July 2004 and June 2005. Compared to total deaths of 294, gives a natural increase of about 1,353. Vital Statistics data reflects a Crude Birth Rate (CBR) for American Samoa is now at 26.7 per 1000 population. The Crude Death Rate (CDR) is at 4.5 per 1000 population. The Infant Mortality Rate (IMR) is at 15.2 per 1000 live births. While the Neonatal Mortality Rate (NMR) is 9.9 per 1000 live births and the Fetal Mortality as measured by Fetal Death Ratio at also 9.9 per 1000 live births.

Crude Birth Rates have dropped from around 40 per 1000 population in the late

eighties and throughout the nineties to about 26 in the past four years. High numbers in 2001 reflected April 2000 data to June 2001 midyear.
