**2018**

Scientific data was provided to the Commission in accordance with the decision relating to the provision of scientific data to the Commission by 30 April 2018	<b>Yes</b>

## ABSTRACT

The Tokelau General Fono approved and endorsed the Tokelau Fisheries Policy in 2012 which clearly specifies the fisheries in Tokelaus' fisheries waters into two main parts;

1. Inshore Fisheries – (0-12nm TW) specific for food security
2. Offshore Fisheries – (12-200nm EEZ) specific for revenue generation,

Tokelau has also identified a buffer zone (closed area) of 13nm in addition to the 12nm Territorial Sea closed to any fishing for food security.

Tokelau does not have a commercial fishing fleet however, it has a large artisanal fleet of about 50 - 60 small 12' to 16' ft. motorised aluminium boats powered by 15-30HP outboard motors. These artisanal fishing boats fish within the 12 nm TS but do not venture out any further than 5 nm from shore.

The Tokelau Fisheries Policy has also specified LL fishing in two categories;

1. Tropical LL Fishery – targeting YFT and BET
2. Albacore LL Fishery – targeting ALB and SWO

In 2017, there was a 0.5% proportionate decrease in days across all PNA VDS participants and Tokelau's days for 2017 were decreased from 1, 000 days to 985. All of Tokelaus' 2017 fishing days were utilised by way of sale to bilateral fishing partners, traded between VDS participating members, contributed to the UST Pool and contributed to the sub-regional Pooling Parties pool days.

In 2017, excluding the UST vessels, a total of 39 PS vessels were licensed by Tokelau

- ) 26 flagged by Korea,
- ) 9 flagged by Kiribati.
- ) 2 flagged by PNG
- ) 1 flagged by Tuvalu
- ) 1 flagged by Vanuatu

Although the catches in the Tokelau EEZ in 2017 occurred throughout, the majority of the catch however, occurred in the Western most parts of the Tokelau EEZ. (Refer Fig. 1).

In 2016 Tokelau also became a participant in the PNA LL VDS established under the Parties to the Palau Arrangement and was allocated 5,000 fishing days under this scheme.

In 2017 it commenced selling her longline fishing days under this vessel day scheme and to maintain compliance with CMM's the Tokelau longline effort remain limited to the set level of 25 licenses (10 Tropical LL and 15 Albacore LL).

In 2017 Tokelau issued a total of 16 longline licenses which were made up of the following;

- ∩ 10 flagged by Vanuatu (2 Tropical LL and 8 ALB LL),
- ∩ 4 flagged by Taiwan (4 Tropical LL),
- ∩ 1 flagged by the Cook Islands (1 ALB LL),
- ∩ 1 flagged by Kiribati (1 Tropical LL).

Like the PS there were LL catches throughout the Tokelau EEZ in 2017 however, the majority of the effort occurred in the South and South Eastern parts of the Tokelau EEZ

(Refer Fig. 2)

While transshipment in the Tokelau EEZ is permitted by law, in certain circumstances as a matter of policy Tokelau does not currently allow transshipment to occur in her EEZ, Territorial Sea or Internal Waters.

Tokelau did not approve nor authorise any transshipment activity in her waters in 2017.

## **INTRODUCTION**

### **Background**

Tokelau is a Small Island Developing State and a Participating Territory in the WCPFC and she continues to develop her tuna management capacities. Current focus includes strengthening the capacities of her Fisheries personnel within the Fisheries Division and annually reviewing and updating her Offshore Fisheries Management Plan (OFMP).

An independent review of her Fisheries Policy is scheduled for the end of the 2018.

Tokelau like many of the countries in the region continues to develop and build sustainable fisheries through sound management decisions that will allow the people of Tokelau to continue benefiting from into the future.

## **ANNUAL FISHERIES INFORMATION**

For the past few years, Tokelau has been participating in the PNA PS VDS established under the Parties to the Palau Arrangement. In 2013, it commenced selling her fishing days under this vessel day scheme.

In 2016 Tokelau also became a participant in the PNA LL VDS established under the Parties to the Palau Arrangement and was allocated a total of 5,000 fishing days. In 2017 it commenced selling her LL fishing days under this vessel day scheme.

Fisheries in Tokelau include two elements.

### **Foreign Purse Seine Fishing & Foreign Longline Fishing**

Offshore fishing is undertaken by foreign fishing vessels of distant water fishing nations and neighbouring Pacific Island States.

There has been little movement regarding the following and there is no indication that it is likely to change over the next few years - Tokelau does not have the capacity to flag fishing vessels so there are no Tokelau-flagged fishing vessels and Tokelau does not charter fishing vessels. There are no ports, wharves or mooring infrastructure and facilities in Tokelau to cater for transshipment, port sampling or for the processing of large-scale tuna catches. All catches by foreign licensed vessels are offloaded outside Tokelau.

Logsheet data for the United States purse-seine vessels under the Treaty (USMLT) are obtained from SPC and data for foreign purse-seine vessels can also be obtained from

SPC pending Tokelau authorising SPC to release these data.

Logsheet data for foreign longliners that have been licensed by Tokelau have been obtained although not at a desired level and this is due to the lack of capacity and resources both human and financial however, having the Tokelau Fishing License General Conditions and Schedules annually reviewed and updated caters for the implementation of current and newly adopted WCPFC CMMs.

The following tables show the annual catch and effort levels in Tokelau waters by foreign fishing vessels for the period 2011 to 2016.

**Table 1:** Annual Foreign purse-seine catches in Tokelau EEZ from 2013 to 2017

### **National Fleet – Artisanal Tuna Fishery**

Tokelaus' Artisanal fleet consists of small 10' – 16' outboard motorised aluminium boats. These vessels fish primarily for local consumption and uses surface trolling and vertical handline methods that mainly target skipjack and yellowfin tuna.

Most artisanal fishing activities in Tokelaus' waters occur within 4 nautical miles from shore. Domestic fisheries development in Tokelau is severely constrained by market access and lack of infrastructure. The Government continues her commitments in developing strategies that will provide these artisanal fishers with opportunities to participate in small-scale commercial tuna fishery developments.

Any commercial inshore fisheries developments need to be authorised by the Taupulega (Village Council) of each respective atoll and is subject to a cost-benefit and market analysis, and an environmental impact assessment to demonstrate it will not jeopardise her food security and will result in creating net economic gains.

The following table provides an estimated annual catch and effort by the Tokelau artisanal fleet in 2017 based on data collected from the artisanal fishery. The SPC TAILS Software that is now being used will help improve the collection of our artisanal fisheries data.

**Table 3: Estimated Artisanal tuna catches in Tokelau waters, 2017**

## RESEARCH AND STATISTICS

Tokelau is seriously concerned about the quality of catch and effort data relating to the Tokelau EEZ fisheries. Due to a variety of reasons—including poor administration and IUU fishing—the fisheries statistics for the Tokelau EEZ are less than adequate. While not necessarily material for stock assessment purposes, Tokelau will not be constrained by the paucity and poor quality of the catch and effort data as it proceeds to determine the nature and extent of the fishing rights in its EEZ.

### TUFMAN - TUF-ART

The tuna research and statistical needs of Tokelau are largely met by the assistance and support of SPCs’ Oceanic Fisheries Programme. Part of this assistance is the implementation of the Tuna Management System TUFMAN, now upgraded to TUFMAN 2, in Tokelau. It is now fully functional with ongoing assistance with training as new systems are developed. This initiative will empower the Fisheries Management Agency with a tool to help provide advice to local government and to help fulfil its obligations and commitments to the Commission and other regional organisations. Whilst TUFMAN 2 manages the commercial data (offshore fisheries) TUF-ART has been implemented for managing the artisanal fishery (inshore fisheries). The new artisanal fisheries component of TUFMAN 2 was introduced to Tokelau fisheries officers in late 2016.

### Monitoring

All foreign fishing vessels that are licensed to fish in Tokelau waters are required to carry an FFA approved Automatic Location Communicator (ALC) or Mobile Transmitting Unit (MTU) and whilst within Tokelau waters, they are monitored by the FFA installed Vessel Monitoring Systems (VMS). This is a critical part of MCS and a workstation was installed in Tokelau in 2005. Tokelau aims to strengthen MCS capabilities through participation in regional and sub-regional strategies and through regional infrastructures. Due to limited resources available, Tokelau must participate in regional and sub-regional collaborations to combat IUU in the Tokelau EEZ. As a participant in the PNA VDS established under the Palau Arrangement, Tokelau is now implementing the VDS for their purse seine fisheries and the longline fisheries and vessels licensed to fish against Tokelau’s vessel days within

its EEZ are also monitored through the PNA VDS systems. Any vessels operating under a new US Tuna Treaty will also use the PNA VDS.

Tokelau appreciates the value of an Observer Programme and will consider appropriate collaborative effort in the region. Required observer services are provided through the FFA Regional Observer Programme (within which Tokelau has a very limited number of observers) and other FFA members' country observer programmes and the PNA Observer Programme. Tokelau has no port and wharfage infrastructure so there is no Port Sampling Programme and no port sampling is carried in Tokelau.

Tokelau falls under the umbrella of the Niue Treaty Subsidiary Agreement, an agreement that provides for cooperation in fisheries surveillance and enforcement in the South Pacific region. Tokelau is committed to working cooperatively with respect to monitoring and enforcement, and sharing MCS assets and information with her counterparts to strengthen the MCS arrangements for Tokelau's EEZ.

Surface and air patrols/surveillance of Tokelau's EEZ are undertaken by New Zealand and FFA coordinated patrols, with input and assistance from the Tokelau Fisheries Management Agency.

## MANAGEMENT AND CAPACITY BUILDING

### Management

In June 2011 Tokelau adopted a new Fisheries Policy. Since then Tokelau had developed an Offshore Fisheries Management Plan (endorsed by General Fono in June 2013) covering the tuna fisheries of the Exclusive Economic Zone, and commenced the consultations of management plans for the inshore fisheries (lagoons, reefs and coastal waters of the Territorial Sea) for each atoll.

For Offshore Fisheries Tokelau has set the following zone-based limits:

PURSE SEINE	EEZ Limit (Days)	2017 (days)	Status
Purse seine fishery	1000 Days	985 Days	WCPFC formally notified through PNA + Tokelau reporting of annual vessel

LONGLINE	Interim Limit	2017 (mt)	Status
Albacore	2500 tons	1,223.36919	Interim limit
Bigeye	2000 tons	136.75055	Interim limit
Yellowfin	4000 tons	353.83264	Interim limit

To implement the purse seine limits Tokelau has become a Participant to the Palau Arrangement and joined the PNA's Vessel Day Scheme (VDS). Tokelau's purse seine vessel day limits are set annually and moves up or down in proportion to changes in the annual PNA VDS TAE. The Conservation and Management Measure 2014-01 agreed by the Western and Central Pacific Fisheries Commission requires the PNA to stay within a TAE whose reference level is the 2010 fishing year effort levels. In the US Tuna Treaty

renewal negotiations Tokelau is now in the 'PNA plus Tokelau' pool.

To implement the longline limits Tokelau has become a participant to the Palau Arrangement and joined the PNA's Vessel Day Scheme (VDS). Tokelau has been allocated 5,000 longline vessel days. Tokelau also has set interim zone limits which are implemented by limiting the number of vessels to be licensed each year (up to 15 vessels in the albacore fishery and up to 10 vessels in the tropical longline fishery) and by setting an interim limit of 3,000 vessel days to be sold each year. Tokelau is a participant to the Tokelau Arrangement, which provides a framework for the development of cooperative zone-based management of South Pacific albacore tuna fisheries Tokelau will work with coastal states with an interest in the longline fisheries prior to formally notifying the country limits to the Commission.

Tokelau has also revised its licensing conditions to meet Tokelau's obligations under CMM 2014-01 and to be consistent with the standardised format recommended by FFA. The Tokelau EEZ Fishing Regulations are under review to ensure that they will support the Tokelau Fisheries Policy and Offshore Fisheries Management Plan, and requirements of the Palau Arrangement.

### **Capacity Building**

Following on from adopting the new Tokelau Fisheries Policy, there is now a strong focus on capacity-building for the Tokelau Fisheries Management Agency.

In 2017 fisheries personnel spent a total of 125 days in training on fisheries management related issues. Tokelau is committed in ensuring ongoing capacity building and developments for her fisheries newly established FMA staff.

**CMM 2017-06: [Seabirds] Annex 2. Guidelines for reporting templates for Part 1 report**

The following tables should be included in the Part 1 country reports, summarising the most recent five years.

**Table x: Effort, observed and estimated seabird captures by fishing year for [CCM] [South of 30°S; North of 23°N; or 23°N – 30°S<sup>1</sup>]. For each year, the table gives the total number of hooks; the number of observed hooks; observer coverage (the percentage of hooks that were observed); the number of observed captures (both dead and alive); and the capture rate (captures per thousand hooks).**

Year	Fishing effort				Observed seabird captures	
	Number of vessels	Number of hooks	Observed hooks	% hooks observed	Number	Rate <sup>2</sup>
2013						
2014						
2015						
2016						
2017						
2018						

<sup>1</sup> State North of 23°N, South of 30°S or 23°N – 30°S, for CCMs fishing in all areas provide separate tables

for each; <sup>2</sup> Provide as captures per one thousand hooks.

**Table y: Proportion of mitigation types<sup>1</sup> used by the fleet.**

	Combination of Mitigation Measures	Proportion of observed effort using mitigation measures					
		2013	2014	2015	2016	2017	2018
	No mitigation measures						
	TL + NS						
	TL + WB						
	NS + WB						
	TL + WB + NS						
	SS/BC/WB/DLS						
	SS/BC/WB/(MOD or BDB)						
	TL						
Provide other combination of mitigation measures here							
	Totals (must equal 100%)						

<sup>1</sup>TL = tori line, NS = night setting, WB = weighted branch lines, SS = side setting, BC = bird curtain, BDB = blue dyed bait, DSLS = deep setting line shooter, MOD = management of offal discharge.

**Table z: Number of observed seabird captures in [CCM] longline fisheries, 2012, by species and area.**

<b>Species</b>	<b>South of 30°S</b>	<b>North of</b>	<b>23°N - 30°S</b>	<b>Tota</b>
E.g. Antipodean albatross				
E.g. Gibson's albatross				
E.g. Unidentified albatross				
E.g. Flesh footed shearwater				
E.g. Great winged petrel				
E.g. White chinned petrel				
E.g. Unidentified				
<b>Total</b>
