

CLARIFICATIONS

25/10/2024

1. What is the current firewall solution architecture?

Currently we are using PFSense. The sites are interconnected with site-to-site VPNs using third party routers on Vyatta.

2. Do all the 3 interconnected sites have firewalls?

Yes.

3. Are there any services hosted out of Noumea and Nabua that is accessed internally and externally?

Yes, both have a DMZ (Demilitarized Zone).

4. Are internet breakouts at each site, or is the only internet breakout at Noumea?

All sites have their Internet connexion.

5. Will the deployment be "as-is" change or will there be a change in the IPAM for all sites?

The solution must integrate with the current IPAM (IP Address Management).

6. Will High Availability (HA) be required at all the 4 sites or just for at Noumea?

HA will be mandatory in New Caledonia and Fiji, and it could be an option for the other small sites.

7. How many remote VPN Users are there?

All users must be able to access to the internal networks and services while on the go.

8. Which sites have the HCI Solution?

Only New Caledonia and Fiji have HCI (Hyper-Converged Infrastructure).
